

AMENDMENTS

In the Specification

The following is a copy of Applicants' specification that identifies language being added with underlining ("___") and language being deleted with strikethrough ("~~—~~"), as is applicable:

For the paragraph beginning on page 25, line 21:

In the discussion herein, the term "opaque reference" is used. An "opaque reference" is a reference that does not expose information about an underlying resource. The possessor of an opaque reference is unable to determine anything about the resource from the opaque reference or to modify the opaque reference so as to alter which resource is being referenced. (In contrast, if a URL is provided, for example, "~~http://www.hp.com~~" the Worldwide Web address of hp.com, it would be fairly straightforward for the web application content to modify the URL to refer to a different resource, for example, "~~http://www.other.com~~" the Worldwide Web address of other.com.)
